

This readme file describes how one can estimate the method developed in “Robust Identification in Regression Discontinuity Designs with Covariates”, available here: https://www.dropbox.com/s/lnysb68v7at4u98/CCE_Robust_RDD_with_Covariates.pdf?dl=0.

Follow these steps, in order:

- 1- Obtain the dataset that we use to replicate the main results from Amarante et al (2016). There is only one dataset that you need: “peso4_anonymized.dta”, which can be downloaded in the paper’s website here: <https://www.aeaweb.org/articles?id=10.1257/pol.20140344>.
- 2- Add all files to the same folder.
- 3- Open RobustRDcov.do, and change line 8 to add your directory path.
- 4- Run RobustRDcov.do.

RobustRDcov.do reads into the dataset, and outputs the figures and the table in the application section of the paper. Please email us at gregorio.caetano@gmail.com if you have any questions!
